

AMENDMENT IN THE ABSTRACT

~~The invention relates to a~~ A closed injection moulded ~~plastics~~ plastic closure (20) having a first closure part (21) and a second closure part (22). The first closure part (21) is connected to the second closure part (22) by ~~means of~~ a snap-on hinged connections. The first and second closure parts (21, 22) have no main hinged connection with each other, but are connected to one another by ~~means of~~ two connecting elements (23.1, 23.2) and ~~in each case two~~ four hinged connections (~~24.1, 24.2, 25.1, 25.2~~) bordering ~~these~~ the two connecting elements (23.1, 23.2) on nonadjacent sides. ~~Elements (39)~~ Coupling elements may serve as an original warranty seal for indicating opening for the first time. If required, ~~an active element (57)~~ a catch and a counter-element (58) serve as a locking mechanism and prevent unintentional opening of the closure (20).
